Scientists call for new grizzly recovery plans EVE BYRON

eve.byron@missoulian.com

Five prominent scientists on Friday urged state and federal officials to pump the brakes on efforts to remove grizzly bears from protections offered under the Endangered Species Act, and update grizzly recovery plans.

Pointing to the second straight year of record-high grizzly mortalities in the Northern Continental Divide Ecosystem, large wildfires, a changing climate that's stifling food sources and landscapes crisscrossed with everything from Forest Service roads to highways, the "region's most iconic species' long-term survival is tenuous," longtime grizzly bear advocate Mike Bader told about 50 people gathered at the University Center in Missoula.

"Grizzly bear management in the Rocky Mountains has long been an exercise in political appeasement of economic interest," he said. "The best available scientific information is ignored or cited out of context to suit management prerogatives. Agency scientists and decision makers are now shackled by an unprecedented exploitative agenda."

Court rules drug fine unconstitutional

35% fine on drugs is denied by judges

PHOEBE TOLLEFSON ptollefson@billingsgazette.com

The Montana Supreme Court has ruled unconstitutional a mandatory 35% fine that's been on the books for certain drug cases since 1995.

The ruling Tuesday came in a case in which a couple was pulled over in 2016 in Dawson County for speeding. Troopers found 144 pounds of marijuana in the trunk and back seat.

The passenger, Ber Lee Yang, ultimately pleaded guilty to drug possession and was fined \$75,600, or 35% of the market value of the drugs.

"It's a punitive thing," said Yang's attorney, Penelope Strong. "It's a knee-jerk thing."

Yang's case marked the second time Strong has challenged the 35% fine before the Montana Supreme Court. The fine applies to convictions for possession or storage of dangerous drugs.

In the majority opinion signed by four justices, the court found the mandatory fine was unconstitutional in all cases because it doesn't permit judges to consider

Kavanaugh avoids controversy in first major appearance

MARK SHERMAN Associated Press

WASHINGTON – Justice Brett Kavanaugh called himself grateful and optimistic Thursday, avoiding controversy in his first major public appearance since his stormy Supreme Court confirmation a year ago.

The 54-year-old Kavanaugh chose a friendly audience for his remarks, a dinner of more than 2,000 members of the Federalist Society at Washington's Union Station. The conservative legal organization has championed judges appointed by President Donald Trump, including Kavanaugh and Justice Neil Gorsuch.

a talk that lasted less than 30 minutes, peppered with sports references, praise for his colleagues and humor.

The justice said friends "paid a at the dinner. heavy price, too heavy a price" for their support during the hearings, including losing business and being insulted and threatened. "I'm well aware of that and it pains me daily," he said.

Kavanaugh largely avoided references to his angry denial of allegations that he sexually assaulted Christine Blasey Ford when they were both teenagers. He was confirmed 50-48, largely along party lines.

Islamic inheritance laws gress to impeach **NOHA ELHENNAWY Associated Press**

CAIRO – One Egyptian woman is taking on the country's inheritance laws that mean female heirs inherit half that of men.

Since her father's death last year, Huda Nasrallah, a Christian, has stood before three different judges to demand an equal share of the property left to her two brothers by their father. Yet courts have twice issued rulings against her, basing them on Islamic inheritance laws that favor male heirs.

Nasrallah, a 40-year-old Christian human rights lawyer, is now challenging the rulings in expected to be handed down later this month. She has formulated her case around Christian docequal shares.

"It is not really about inheritance, my father did not leave us millions of Egyptian pounds," she said. "I have the right to ask to be treated equally as my brothers."

Calls for equal inheritance rights began to reverberate across the Arab world after the Tunisian government had proposed a bill to this effect last year. Muslim feminists hailed the bill.

Egyptian woman fights unequal

Human rights lawyer Hoda Nasrallah poses for a portrait Monday at her office in Cairo.

But there has been a blacka higher court. A final verdict is lash from elsewhere in the Arab world. Egypt's Al-Azhar, the highest Sunni religious institution in the Muslim world, vehetrine which dictates that heirs, mently dismissed the proposal as regardless of their sex, receive contradictory to Islamic law and destabilizing to Muslim societies. But there is hope that Tunisia could have broken the taboo on the topic for the region.

Nasrallah belongs to Egypt's estimated ten million Coptic Christians, who live in a predominantly Muslim society governed by a constitution in which Islamic Shariah is the main source of legislation. Christians face restric- rules of one faith on people of antions in inter-religious mar- other faith," she says.

riages and church building, and are banned from proselytizing to Muslims.

Egypt's legal system grants the Coptic church full authority over personal status matters of Copts, namely marriage and divorce. But the church does not have the same powers over its followers' inheritance rights.

One of the oldest Christian communities in the world, the Egyptian Coptic church is also deeply conservative on social matters, banning divorce except in cases of adultery or conversion to Islam.

Nasrallah says she is making her case on religious grounds because she believes the court is more likely to respect existing structures within the society. She says she is trying to capitalize on a rare Christian doctrine that respects gender equality.

Karima Kamal, a Coptic female columnist at the privately-owned al-Masry al-Youm daily, says that Nasrallah's case highlights the double discrimination that Coptic women can face in a society where religion is printed on government-issued identification cards.

"You should not implement the

whether the fine was excessive.

In other words, "You have to do the 'ability to pay' analysis before you impose this fine," Strong said.

Outside of free speech cases, a challenge like the one brought in Yang's case is "very rarely successful," said University of Montana law professor Jordan Gross. That's because the challengers are seeking to declare a law unconstitutional in every single case -amuch broader finding than arguing someone's individual rights were violated on a specific occasion.

The court's order said the mandatory fine, which was written stark contrast" to another state law that says a judge may not order a fine unless the defendant is able to pay it.

Strong said she's seen the 35% fine play out differently across the in the original proceeding. state. For instance, she's never seen it brought into play by prosecutors in Yellowstone County, but peal," she said. has seen it invoked in Bozeman

the financial burden of a criminal conviction was "an important backdrop" to the Tuesday ruling. Gross said "we keep poor people poor" through the criminal justice system.

"You know, because if you saddle someone with this fine, is she going to pay it?" Gross said. "No, but she's going to live her life under the shadow of it. She might be paying, like, \$25 a month for the rest of her life."

Yang's case was charged alongside that of the driver, her ex-husband. Yang told authorities she was driving with her ex-husband from Sacramento back to Minnesota and did not discover the marijuana in the vehicle until she had already begun the drive.

The ex-husband was given into state law in 1995, stands "in a \$4,000 fine and a suspended sentence. Strong actually represented the ex-husband in district court, and was able to negotiate his charges down.

Strong did not represent Yang "But when I saw the facts of this

Bears

From A1

He noted that the five scientists - Frank Craighead, David Mattson, Brian Horeisi, Lee Metzgar and Fred Allendorf – are independent from "the government chain of command," which might limit others who still work within state and federal agencies from speaking their minds.

All five agreed that for grizzly populations to thrive, the independent populations of five ecosystems need to be connected before they can be considered to be recovered from the threat of extinction. The population includes about 750 grizzlies in the Greater Yellowstone Ecosystem; about 1,000 in the Northern Continental Divide Ecosystem (NCDE); about 50 to 70 in both the Cabinet-Yaak and Selkirk ecosystems, and none the NCDE grizzlies from the Enin the Selway-Bitterroot Ecosystem.

Last year, the U.S. Fish and plans to possibly remove the NCDE population from protection under the Endangered Species Act, based on a federal judge's Yellowstone National Park ecosystem. Judge Dana Christensen in Missoula wrote that the government can't delist bears in one ecosystem without exploring how that might affect grizzlies in other all five U.S. subpopulations." ecosystems.

Greg Gianforte, R-Mont., met Geological Survey, noted that with Interior Secretary David in the early 1800s, an estimated ⁰⁰ Bernhardt on the Rocky Moun-¹ tain Front to puch for wars and ¹ tain Front to push for removal of across North America, but the

dangered Species Act, saying the population has recovered.

'Grizzly bears are not recov-Wildlife Service put a hold on ered," said Metzgar, a retired population ecologist who served on the Yellowstone Grizzly Bear Population Task Force. "No existing population includes suffiopinion involving grizzlies in the cient numbers to be considered recovered, no recovery zone is large enough to accommodate a recovered population and there is no evidence for natural genetic exchange among grizzly bears in

Mattson, a recently retired However, in October U.S. Rep. wildlife biologist with the U.S.

population dropped by 98% by the time they were listed as a threatened species in 1975. Today's population, whether it's 1,700 or 2,000, still represents only 4% of how many once were here.

"Does that constitute recovery in light of the magnitude of the losses?" Mattson asked. "It's a relatively small isolated population that also faces severe threats."

He said that some people argue that the bears' populations are increasing because they're moving out of the high country into the foothills and plains, but that might not be true. The loss of food sources from wildfires and climate change instead could be pushing them back into their historical ranges, which now are occupied by humans.

thing, Mattson added, but people need to learn how to live with grizzlies. He pointed to the Blackfoot River drainage and the Tom Miner basin as places where landowners are working with agencies to protect both the bears and the Montana, warned that the isolated people.

"People can learn from each other, and there's also incentives and disincentives we can provide," Mattson said. "A lot of people don't want grizzly bears where they're living, but will live with them if the incentive is right. But for a lot of people it's easier to pick up the phone and call Wildlife Serivces to kill the bears.

"I argue that a combination of funding, expertise, good practices on the ground and the right mix of incentives and disincentives will work. That's why the Endangered Species Act is really importing at giving people the extra nudge toward what needs to be done. If you remove the Endangered Species Act, you won't have those resources."

Craighead, author of numerous reports on grizzly bear ecology, said that their old models have been verified by what they're seeing on the ground today, but new science and research needs to be considered and the grizzly bear recovery plan updated.

"A lot of people will complain, saying, 'You are moving the goal posts; we said get 50 bears in the Cabinet-Yaak and now you're moving that," Craighead said. "But it's not a football game. It isn't a game at all, really. It's real-time science on a changing a statement read at Friday's prolandscape with changing climate gram.

That's not necessarily a bad with changing human and wildlife populations, and we need to have flexibility and change the recovery plan as we move forward."

> Allendorf, a former Fulbright scholar and biology professor emeritus at the University of populations of about 700 grizzlies in the greater Yellowstone ecosystem probably means they're inbreeding, which can lead to an "extinction vortex" of decreased reproduction and survival. He urged that the conservation strategy adopted for the ecosystem in 2016, which called for the maintenance of a minimum of 500 bears, should increase population goals.

"Five hundred bears are not enough to avoid the harmful effects of inbreeding depression," Allendorf said. "With 500 bears, some may not reproduce, some are really successful at reproducing. That may mean that there's more population size but fewer genetic diversity."

Horejsi, who has a doctorate in behavior ecology of large mammals, added that the current U.S. Fish and Wildlife Service conservation plan for grizzlies in the NCDE is critically flawed, because it presumes that their population and habitat in British Columbia and Alberta are viable, and that Canadian regulatory standards and practices will buttress demographic and genetic continuity for Montana's bear populations.

"British Columbia struggles with near-crippling regulatory inadequacy in land and wildlife management affairs," he wrote in
